# CCCSR LINE UP CLAMPS

## PIPELINE • CONSTRUCTION

Cross Country Canada External Line Up Clamps are an innovative solution that can improve the quality and safety of pipeline welding applications.

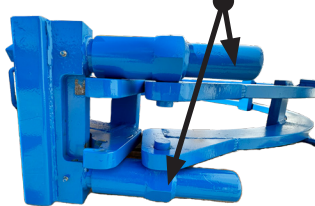

CCCSR Line Up Clamps are designed to provide maximum access to the weld without the need for rolling the clamps. By allowing for more pipe to be exposed during the welding process, the risk of cracked welds upon clamp removal is greatly reduced in comparison to other clamps in the industry.

Not only will the CCCSR Line Up Clamp ensure a smoother welding process but will also improve the overall efficiency of welding applications by reducing the amount of time required for setup and adjustments. This can be especially valuable in high-volume welding applications where time is of the essence.
